

Introducing...

GCE1000 series

The World's Most Advanced Public Warning & Notification System

FEATURES:

- 100% self contained unit using encrypted cellular technology needs no wiring to outside networks
- Eco friendly solar unit never needs to be connected to a power source...100% "Green", 100% full power day or night.
- Multiple, redundant access paths include secure encrypted web terminal access, via computer with Internet access, any standard land line phone or any cellular phone. No need for one central monitoring station. Both phone notification system and loudspeaker system can be activated together, or individually to deliver (unlimited) pre-recorded messages, siren tones OR live, real time voice notifications.
- Powerful 120-decibel directional loudspeaker horn design provides clear notifications, providing complete area coverage regardless of accessibility of power or telephone lines. Works where others can't. Deliver your message with pinpoint accuracy when and where you want it.
- Small, compact, design allows for low impact to environment...no need for towers, or other large structures, able to install at any site within days instead of months. Can be mounted via small pole mounts, wall mount, roof mount, or used as a portable freestanding unit. Rated for hurricane force conditions.
- Complete logging of system usage with all messages archived.
- Automatic system maintenance & self testing.
- System interfaces with law enforcement, medical, and fire departments and any other outside department desired. Can activate any group of units individually or together depending on desired notification reach.
- State of the art technology, field proven for years by law enforcement, including use during actual hurricanes.
- System allows for unlimited expandability at any time, without the need for any additional infrastructure.
